In Our City - Class Concepts for MVP sprints

**MVP 1:** Create website groundwork & resource management
Lecture(s):
- Data, Information, & Knowledge Management

Topic: Knowledge/Information Management
Summary: The aim for this MVP was to create the foundation for my website that provided users with the information & resources for future conversations while looking professional and not overwhelming users with information.

**MVP 2:** Add & work with forum plugin
Lecture(s):
- Content & Dis/Information
- Data, Information, & Knowledge Management
- Community Orientations

Topic: Using metadata in the form of tags to link & sustain conversations
Summary: The aim for this MVP was to utilize multiple forum plugins to create a basic forum in which users will eventually be able to post & reply to. The primary focus of this MVP was to find and use a plugin which would allow forum posts to contain tags which users can specifically subscribe to and have a feed of their tag-specific subscriptions should they wish to. This is done so that there is the future potential for continued open-ended conversation in the next MVP.

**MVP 3** - Add functionality for user registration
Lecture(s):
- Community Orientations

Topic: Open-Ended Conversation Orientation
Summary: The aim for this MVP is to be able to finalize the project and provide users with the functionality to create their own accounts and participate within the Open-Ended Conversations that can potentially be tied together by the metadata introduced in MVP 2.
